METHOD, APPARATUS, AND COMPUTER-READABLE MEDIUM FOR DYNAMICALLY RENDERING A USER INTERFACE MENU

Abstract

A method, apparatus, and computer-readable medium are provided for dynamically generating a user interface menu. According to the method, a menu definition file is stored that contains data describing one or more menu items to be displayed on the menu. A view definition file is stored separate from the menu definition file that contains data describing how the menu should appear when displayed. The contents of the view definition file and the menu definition file may be utilized together to dynamically display the menu.
